ELSEVIER

Comput. Methods Appl. Mech. Engrg. 135 (1996) 397–401

Computer methods in applied mechanics and engineering

Subject Index of Volume 135

Boundary element methods
A new boundary spectral strip method for non-periodical geometrical entities based on analytical integrations, O. Michael, J. Avrashi and G. Rosenhouse 327–342

Boundary layers
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241

Cavitation flows
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61

Collocation method
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241
A new boundary spectral strip method for non-periodical geometrical entities based on analytical integrations, O. Michael, J. Avrashi and G. Rosenhouse 327–342

Control theory
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185

Design of programs
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185

Dynamics
Observation and simulation of a large signal mechanical vibrating system, N.N. Barsoum and G.A. Elkobrosy 1– 13
An efficient tire model for the analysis of spindle forces produced by a tire impacting large obstacles, C.W. Mousseau and G.M. Hulbert 15– 34
Numerical integration of multibody system dynamic equations using the coordinate partitioning method in an implicit Newmark scheme, P. Fisette and B. Vaneghem 85–105

Elasticity
Finite element implementation of incompressible, transversely isotropic hyperelasticity, J.A. Weiss, B.N. Maker and S. Govindjee 107–128
Element-free Galerkin methods in combination with finite element approaches, D. Hegen 143–166

Compound branching in elastic systems, K.A. Lazopoulos and S. Markatis 187–200
A note on enhanced strain methods for large deformations, P. Wriggers and S. Reese 201–209
The post-critical analysis of axisymmetric hyper-elastic membranes by the finite element method, J. Shi and G.F. Moita 265–281
Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306
A new boundary spectral strip method for non-periodical geometrical entities based on analytical integrations, O. Michael, J. Avrashi and G. Rosenhouse 327–342

Finite difference methods
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241
Explicit finite-difference methods for non-linear dynamic systems: Froude's pendulum, K. Djidjeli, Z. Guan, W.G. Price and E.H. Twizell 243–264

Finite element and matrix methods
An efficient tire model for the analysis of spindle forces produced by a tire impacting large obstacles, C.W. Mousseau and G.M. Hulbert 15– 34
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
Finite element implementation of incompressible, transversely isotropic hyperelasticity, J.A. Weiss, B.N. Maker and S. Govindjee 107–128
A Tri–Tree multigrid recoarsement algorithm for the finite element formulation of the Navier–Stokes equations, S.Ø. Wille 129–142
Element-free Galerkin methods in combination with finite element approaches, D. Hegen 143–166
A note on enhanced strain methods for large deformations, P. Wriggers and S. Reese 201–209
Non-linear 'master–slave' relationships for joints in 3-D beams with large rotations, G. Jelenić and M.A. Crisfield 211–228
The post-critical analysis of axisymmetric hyper-elastic membranes by the finite element method, J. Shi and G.F. Moita 265–281
Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306
A parallel structural optimization method and its implementation on a Transtech Paramid, X. Wang, F.W. Williams and D. Kennedy 381–392

Fluid mechanics
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
A Tri–Tree multigrid recoarsement algorithm for the finite element formulation of the Navier–Stokes equations, S.Ø. Wille 129–142
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241

Fracture mechanics
Element-free Galerkin methods in combination with finite element approaches, D. Hegen 143–166

General Rayleigh–Ritz and Galerkin techniques
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
Element-free Galerkin methods in combination with finite element approaches, D. Hegen 143–166
Three-dimensional mixed explicit–implicit generalized Galerkin spectral element methods for high-speed turbulent compressible flows, K.T. Yoon and T.J. Chung 343–367

Graphics
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241

Heat and diffusion
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185

Incompressible and near incompressible media
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
Finite element implementation of incompressible, transversely isotropic hyperelasticity, J.A. Weiss, B.N. Maker and S. Govindjee 107–128
A note on enhanced strain methods for large deformations, P. Wriggers and S. Reese 201–209

Kinematics
Automated synthesis of surface generation equations with application to gearing, V.T. Portman 63– 83

Miscellaneous topics
Composite grid method for hybrid systems, J. Fish, V. Belsky and M. Pandheeradi 307–325

Modern computer architecture
A parallel structural optimization method and its implementation on a Transtech Paramid, X. Wang, F.W. Williams and D. Kennedy 381–392

Nonlinear dynamics of systems
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185

Nonlinear mechanics
An efficient tire model for the analysis of spindle forces produced by a tire impacting large obstacles, C.W. Mousseau and G.M. Hulbert 15– 34
Finite element implementation of incompressible, transversely isotropic hyperelasticity, J.A. Weiss, B.N. Maker and S. Govindjee 107–128
Compound branching in elastic systems, K.A. Lazopoulos and S. Markatis 187–200
A note on enhanced strain methods for large deformations, P. Wriggers and S. Reese 201–209
Non-linear 'master–slave' relationships for joints in 3-D beams with large rotations, G. Jelenić and M.A. Crisfield 211–228
The post-critical analysis of axisymmetric hyper-elastic membranes by the finite element method, J. Shi and G.F. Moita 265–281

Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306

Numerical solution procedures
An efficient tire model for the analysis of spindle forces produced by a tire impacting large obstacles, C.W. Mousseau and G.M. Hulbert 15– 34
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
Numerical integration of multibody system dynamic equations using the coordinate partitioning method in an implicit Newmark scheme, P. Fisette and B. Vaneghem 85–105
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185
A note on enhanced strain methods for large deformations, P. Wriggers and S. Reese 201–209
Non-linear 'master–slave' relationships for joints in 3-D beams with large rotations, G. Jelenić and M.A. Crisfield 211–228
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241
Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306

Optimization and design of structures
A multicriterial material tailoring of a hollow cylinder in functionally gradient materials: Scheme to global reduction of thermoelastic stresses, K. Tanaka, H. Watanabe, Y. Sugano and V.F. Poterasu 369–380
A parallel structural optimization method and its implementation on a Transtech Paramid, X. Wang, F.W. Williams and D. Kennedy 381–392

Plasticity
Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306

Solution of differential equations
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241
Explicit finite-difference methods for non-linear dynamic systems: Froude's pendulum, K. Djidjeli, Z. Guan, W.G. Price and E.H. Twizell 243–264

Solution of integral equations (singularity method)
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241
A new boundary spectral strip method for non-periodical geometrical entities based on analytical integrations, O. Michael, J. Avrashi and G. Rosenhouse 327–342

Solutions of ordinary and partial differential equations
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61

Element-free Galerkin methods in combination with finite element approaches, D. Hegen 143–166
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185
Numerical studies of unsteady boundary layer flows past an impulsively started circular cylinder by GDQ and GIQ approaches, C. Shu, B.C. Khoo, Y.T. Chew and K.S. Yeo 229–241

Spectral element methods
Three-dimensional mixed explicit–implicit generalized Galerkin spectral element methods for high-speed turbulent compressible flows, K.T. Yoon and T.J. Chung 343–367

Stability in structural mechanics
Compound branching in elastic systems, K.A. Lazopoulos and S. Markatis 187–200

Structural mechanics
An efficient tire model for the analysis of spindle forces produced by a tire impacting large obstacles, C.W. Mousseau and G.M. Hulbert 15– 34
Compound branching in elastic systems, K.A. Lazopoulos and S. Markatis 187–200
A note on enhanced strain methods for large deformations, P. Wriggers and S. Reese 201–209
Non-linear 'master–slave' relationships for joints in 3-D beams with large rotations, G. Jelenić and M.A. Crisfield 211–228
Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306

Systems of linear and nonlinear simultaneous equations
Development of elasto-plastic material models in a natural coordinate system, P. Duxbury and X. Li 283–306

Thermal effects and thermodynamics
A new computer method for temperature measurement based on an optimal control problem, N. Damean, Z. Houkes and P.P.L. Regtien 167–185

Transport phenomena
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61

Turbulence
Three-dimensional mixed explicit–implicit generalized Galerkin spectral element methods for high-speed turbulent compressible flows, K.T. Yoon and T.J. Chung 343–367

Viscous flow
Bubble-stabilized spectral methods for the incompressible Navier–Stokes equations, C. Canuto and V. Van Kemenade 35– 61
A Tri–Tree multigrid recoarsement algorithm for the finite element formulation of the Navier–Stokes equations, S.Ø. Wille 129–142
